

Please find our comments with respect to following areas :

1. The upper limit of the number of contractors :

It would be better to control the upper limit on the number of the contractors to manage the level of quality services. However, I do suggest the number of contractors should increase by a certain percentage in the next SOA-QPS, say 15% per agreement.

2. Merging or separation of existing service categories :

We would propose allowing "Feasibility Study" services to be included in the service coverage of the existing Category 3 services (both Major and Minor group).

3. Demarcation limit of minor and major groups in terms of contract value under certain service category :

We agree to remove this limit. We should judge based on the complexity and the required level of expertise to assign the project to certain category.
