

Success Story of Project Completed for the Government

Date: 15 FEB 2017

Project Owner: Transport Department

Project Name (in English): eTraffic News Mobile App

Project Name (in Chinese): N/A

Project Description: Mobile app for real-time traffic news. User can check traffic flows, jams and incidents from the Transport Department, and to get notification on special traffic arrangements for advance journey planning.

Means of Service Acquisition: Invitation for Tender

Contractor Name: Zensis Limited

Subcontractor Name: N/A

Project Commenced on: 08/FEB/2016

Project Completed on: 03/OCT/2016

Zensis provided total solution for Transportation Department in development of the eTraffic News app. By meeting up with Transportation Department, we collected user requirements and we further interviewed the operation team regarding the workflow of content update. Finally, Zensis delivered the iPhone and Android apps with excellent user interface and user experience. On the other hand, we delivered an easy-to-use web-based content management console, which integrated with Transportation Department's information system, for efficient content update by operation team. After service deployment, Zensis continues to provide support and maintenance service for the system.

In technical aspect, Zensis delivered the solution in cloud in which the application server and database server run in a cluster mode. That means the service will be highly available to avoid service down time. Besides, we have adopted a channel based push notification design so that end user can subscribe different types of transport news notification service and at different specific time range.
