

Cindy Wong (IT Management Trainee):

IT covers a wide range of applications from mobile phones to rocket launching, which can all be regarded as technologies. For me, IT is a way to solve problems. It helps us solve lots of difficulties in our lives and work. We should combine our knowledge, information collected and innovative technologies to form a very competitive tool to meet our different needs.

Michael Mak (Senior Analyst (IT Solutions)):

When I was young, I liked to play computer games, and at the same time, I also liked to develop web pages. When developing web pages, I realised that I love coding very much. While I was writing a program, I discovered that I could create another world and write something that many people could see and love. I am fascinated by the coding world and thus love IT very much.

Simon Lau (Manager (IT Field Services)):

Being engaged in the IT industry, most of the time we have to work hard to meet the deadline. Sometimes I really don't understand why we still have to catch up with the deadline for projects that originally should have plenty of time for completion. After working in the industry for some times, I have realised that the IT industry is changing too fast. If some projects cannot be completed within an appropriate period of time, they may lag behind others when they are launched to the market, and as a result lose all selling points.

Michael Mak (Senior Analyst (IT Solutions)):

I think the most important thing is: firstly, don't be afraid of boring; secondly, you have to be very concentrated in doing a task. When you first engage in the IT industry, you will find that you have to handle a large amount of programming codes, which take you a long time to understand and analyse. It requires great concentration and persistence to get the job done. That's why many people are not competent to the work of IT as they find the programming work very hard. But to me, I am very interested in the programming work.

Christoph Ganswindt (Executive Director, Information Technology and Sustainability, The Hong Kong Jockey Club):

The Hong Kong Jockey Club and its strategy is to perform on the highest integrity level in the industry. We implement our solutions entirely on our own and that provides us the opportunity to create jobs in every roles (aspects) of IT (that you) can imagine, from (project) development, design, architecture to (system) operations, etc. So

(Therefore), if someone is looking for something after his/her study that enabling him/her to learn all about IT, Jockey Club is the right place to go.

“IT – You Study, We Hire!”
