

Carol Pun (Consultant, Global Business Services):

I find this IT career very meaningful. Our lives are closely related to IT, and our job is to bring forth innovations and reforms to different companies. In other words, we have indirectly contributed to the development of the society, which has in turn brought more convenience and efficiency to our lives.

Joseph Ma (Cognitive and Analytics Leader, Hong Kong, IBM Global Business Services):

No matter in the past, the present and the future, IT is a challenge for me every day. I come across different customers, new technologies and I am learning every day. This challenge is exactly the most interesting and fascinating part I find in IT, and I can have new learning opportunities every day.

Justin Tong (Sales Specialist, Storage Business Unit, IBM Systems Hardware):

When I first joined the IT industry, the life was pretty different from my college life. Upon graduation, I had no ideas about working. I was nothing but a blank sheet of paper. What I had to experience at the beginning of my work was to keep learning and asking, and not being afraid to sweat and toil.

Joseph Ma (Cognitive and Analytics Leader, Hong Kong, IBM Global Business Services):

The most important thing is to be creative and flexible in your work. People who are interested in technologies are probably smarter, keen on trying new things and helping themselves and others with some new ideas derived from technologies. They can lead a better and more rewarding life. These are definitely the characteristics that IT practitioners and students should have.

Carol Pun (Consultant, Global Business Services):

If you are interested in joining the IT industry, you should acquire the business know-hows of all sectors besides some basic IT knowledge. It is because our IT profession strives to bring new solutions to different industries. Therefore, an experienced and knowledgeable person can definitely bring his/her IT knowledge into full play.

Tony Tai (Former General Manager, IBM China/Hong Kong Limited):

Hi-techs like artificial intelligence, big data, Internet of things, cloud computing, blockchain, etc., are changing our livelihood, economy, society and education, bringing forth significant contributions. We sincerely invite all students to choose IT for their studies and join us. By virtue of the knowledge and creativity in the above

technologies, we can help all sectors innovate and change, make our living better and forge ahead social development.

“IT – You Study, We Hire!”
