

Chris Ho (IT Trainee):

IT enables companies to develop their business. I think to be able to apply IT in our daily business operations is very interesting.

Jenny Fan (IT Associate - End User Computing):

I think the most special thing of the IT industry is the emergence of many new ideas and technologies every day, making me find IT more interesting and challenging. I find that in the process of finding solutions, which involves research, planning and execution, there is so much to learn and I can put my learning into practice. During this process, some of my soft skills and technical skills, such as communication and knowledge of different computer systems, have improved a lot.

Chris Ho (IT Trainee):

We often approach problems from an IT angle and overlook the needs of the business. If this happens, I would work together with colleagues who are more experienced and engage the users to understand their real needs. Through this kind of communication, I understand how IT can support the operation of our business, and how I can devise better solution for users.

Jenny Fan (IT Associate - End User Computing):

I think keeping up the passion is most important. The IT sector is evolving rapidly and we will keep on learning and improving if we are passionate about our work. In addition, curiosity is important so that we can keep on learning and reflect critically on how we live. Finally, I hope that everyone will have the opportunity to learn and perform in their work to the best of their ability.

Paul Poon (Former Managing Director, CLP Power Hong Kong Limited):

In order to support the Government's initiatives of developing Hong Kong into a smart city, CLP has actively applied innovative technology and provided smarter and greener electricity services to the public. Our colleagues have all along demonstrated their outstanding performance in information and communications technology industry and won many awards, which are testimonies to the relentless efforts we made in nurturing talents.

We welcome young people who are interested in information and communications technology to join the power industry so that we can work together in the development of Hong Kong.

“IT – You Study, We Hire!”
